

JANVEE GHADGE

Pune, India | 9307700819 | Janvee.ghadge2005@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Computer Engineering student with a strong foundation in Data Structures, Algorithms, and Web Development. Experienced in building full-stack applications using HTML, CSS, JavaScript and database systems. Passionate about problem-solving and developing practical, user-focused solutions, with a growing interest in scalable system design and modern web technologies.

KEY SKILLS

Technical Skills	C++, JavaScript, Python, SQL, HTML, Java, jQuery, MySQL, Image Recognition APIs, Location Services, Problem Solving, Critical Thinking, Leadership, Effective Communication, Active Listening, Team Collaboration, Adaptability
Tools	Figma, Canva, UI/UX Design Tools

WORK EXPERIENCE

Participant	Year 2023
- Developed a “Smart USB: Anti Data Breaching Secure Pendrive” concept for Smart India Hackathon(SIH) featuring authentication-based access control, device tracking, and malware detection to enhance data security. - Designed features including offline device tracking, secure editing authentication, cloud backup integration, and protection against data phishing threats. - Collaborated in a team environment to ideate, design, and present a security-focused hardware-software solution.	
Organizing Team Member, Techfest PCCOE	Year 2024
- Assisted in organizing and managing technical events, ensuring smooth execution through coordination and planning. - Contributed to designing promotional materials including banners and digital assets, improving event visibility and engagement. - Provided on-ground support and participant coordination during workshops and competitions.	

EDUCATION

Pimpri Chinchwad College of Engineering, Pune, Bachelor of Technology in Computer Science and Engineering
Year: 2023-2027
APJ college of Science and Commerce
Year: 2021-2023

PROJECTS

EcoRecycle – E-Waste E-Commerce & Recycling Platform
- Developed a React.js-based web platform connecting e-waste donors with certified recycling industries, improving accessibility and awareness through an intuitive and responsive interface. - Implemented image recognition and Google Search integration to enable users to identify electronic waste and access recycling information efficiently, enhancing usability and decision-making. - Built location-based search functionality to help users find nearby recycling centres using geolocation services, improving platform practicality and real-world impact. - Designed secure interaction flows between users and recyclers through structured listing and request systems, ensuring reliable communication and transaction handling.
Cloudfly – Full-Stack Flight Booking System
- Developed a full-stack flight booking application with secure user authentication and session management using Node.js and Express.js, ensuring protected access and smooth user experience. - Designed and integrated RESTful APIs to handle backend operations and database communication, enabling efficient handling of users, bookings, and transactions. - Built a MySQL-based database system to manage flight data, booking history, and payment information, improving data organisation and retrieval efficiency. Implemented responsive UI with HTML, CSS, and JavaScript, ensuring seamless navigation and enhanced user interaction.
Online Clothing Rental Platform
- Developed a web-based rental platform with dynamic product listings and filters for location, price, and style, improving user search efficiency and engagement. Implemented interactive UI components using jQuery and Bootstrap, enhancing user experience and responsiveness. - Integrated rental duration and availability features to support real-time booking functionality and improve usability.
Game Development Project – Unreal Engine
- Built a 3D game environment using Unreal Engine with player movement, camera systems, and basic AI using Blueprints, delivering an interactive gameplay experience. - Designed and optimised 3D assets using Blender, improving rendering performance and visual quality. - Implemented animation systems using Mixamo and Unreal Animation Blueprints, enabling realistic character movement. - Optimised performance by reducing draw calls and asset load, achieving smooth gameplay on mid-range systems.
Agentic AI – Local Document Intelligence System
- Developed a local AI-powered document question-answering system using retrieval pipelines and agent-based workflows, improving information accessibility. - Implemented document chunking and retrieval mechanisms to process large datasets efficiently and enhance response accuracy. - Designed a manifest-driven workflow and evaluation framework to measure system performance and optimise retrieval quality.

Achievement

- Attended and contributed to workshops at IIT Bombay Techfest, earning certification in Ethical Hacking and strengthening cybersecurity knowledge.
- Secured copyright for the development of EcoRecycle, a digital platform focused on sustainable e-waste management solutions
